

Regulatory Disclosures

31 December 2022

CONTENTS	PAGE
1. Key prudential ratios, key metrics, overview of risk management and RWA	
KM1: Key prudential ratios	1
KM2(A): Key metrics – LAC requirements for material subsidiaries (at LAC consolidation group level)	2
KM2(B): Key metrics – TLAC requirements for non-HK resolution entity (at resolution group level)	3
OVA: Overview of risk management	4
OV1: Overview of RWA	8
2. Linkages between financial statements and regulatory exposures	
LI1: Differences between accounting and regulatory scopes of consolidation and mapping of financial statement categories with regulatory risk categories	9
LI2: Main sources of differences between regulatory exposure amounts and carrying values in financial statements	11
LIA: Explanations of differences between accounting and regulatory exposure amounts	12
PV1: Prudent valuation adjustments	14
3. Composition of regulatory capital	
CC1: Composition of regulatory capital	15
CC2: Reconciliation of regulatory capital to balance sheet	21
CCA(A): Main features of regulatory capital instruments and non-capital LAC debt instruments	23
TLAC1(A): LAC composition of material subsidiary (at LAC consolidation group level)	33
TLAC2: Material subsidiary – creditor ranking at legal entity level	34
4. Macroprudential supervisory measures	
GSIB1: G-SIB indicators	35
CCyB1: Geographical distribution of credit exposures used in countercyclical capital buffer	35
5. Leverage ratio	
LR1: Summary comparison of accounting assets against leverage ratio exposure measure	35
LR2: Leverage ratio	36
6. Liquidity	
LIQA: Liquidity risk management	37
LIQ1: Liquidity Coverage Ratio – for category 1 institution	40
LIQ2: Net Stable Funding Ratio – for category 1 institution	42
7. Credit risk for non-securitization exposures	
CRA: General information about credit risk	44
CR1: Credit quality of exposures	45
CR2: Changes in defaulted loans and debt securities	45
CRB: Additional disclosure related to credit quality of exposures	46
CRC: Qualitative disclosures related to credit risk mitigation	49
CR3: Overview of recognized credit risk mitigation	50

CONTENTS		PAGE
7. Credit risk for non-securitization exposures (continued)		
CRD:	Qualitative disclosures on use of ECAI ratings under STC approach	50
CR4:	Credit risk exposures and effects of recognized credit risk mitigation – for STC approach	51
CR5:	Credit risk exposures by asset classes and by risk weights – for STC approach	52
CRE:	Qualitative disclosures related to internal models for measuring credit risk under IRB approach	53
CR6:	Credit risk exposures by portfolio and PD ranges – for IRB approach	58
CR7:	Effects on RWA of recognized credit derivative contracts used as recognized credit risk mitigation – for IRB approach	66
CR8:	RWA flow statements of credit risk exposures under IRB approach	67
CR9:	Back-testing of PD per portfolio – for IRB approach	68
CR10:	Specialized lending under supervisory slotting criteria approach and equities under simple risk-weight method – for IRB approach	71
8. Counterparty credit risk		
CCRA:	Qualitative disclosures related to counterparty credit risk (including those arising from clearing through CCPs)	72
CCR1:	Analysis of counterparty default risk exposures (other than those to CCPs) by approaches	73
CCR2:	CVA capital charge	73
CCR3:	Counterparty default risk exposures (other than those to CCPs) by asset classes and by risk weights – for STC approach	74
CCR4:	Counterparty default risk exposures (other than those to CCPs) by portfolio and PD range – for IRB approach	75
CCR5:	Composition of collateral for counterparty default risk exposures (including those for contracts or transactions cleared through CCPs)	76
CCR6:	Credit-related derivatives contracts	76
CCR7:	RWA flow statements of default risk exposures under IMM(CCR) approach	76
CCR8:	Exposures to CCPs	77
9. Securitization exposures		
SECA:	Qualitative disclosures related to securitization exposures	78
SEC1:	Securitization exposures in banking book	78
SEC2:	Securitization exposures in trading book	78
SEC3:	Securitization exposures in banking book and associated capital requirements – where AI acts as originator	78
SEC4:	Securitization exposures in banking book and associated capital requirements – where AI acts as investor	78

CONTENTS	PAGE
10. Market risk	
MRA: Qualitative disclosures related to market risk	79
MRB: Additional qualitative disclosures for AI using IMM approach	80
MR1: Market risk under STM approach	81
MR2: RWA flow statements of market risk exposures under IMM approach	81
MR3: IMM approach values for market risk exposures	82
MR4: Comparison of VaR estimates with gains or losses	83
11. Interest rate risk in banking book	
IRRBA: Interest rate risk in banking book – risk management objectives and policies	84
IRRBB1: Quantitative information on interest rate risk in banking book	85
12. Remuneration	
REMA: Remuneration policy	86
REM1: Remuneration awarded during financial year	86
REM2: Special payments	86
REM3: Deferred remuneration	86
13. Operational risk	86

6c	If the capped subordination exemption applies, the amount of funding issued that ranks pari passu with excluded liabilities and that is recognised as external loss-absorbing capacity, divided by funding issued that ranks pari passu with excluded liabilities and that would be recognised as external loss-absorbing capacity if no cap was applied	Not applicable	Not applicable	Not applicable	Not applicable	Not applicable

Footnote:

¹ The relevant non-HK LAC regime in the non-HK jurisdiction is not yet implemented and that the values for rows 1 to 5 are reported on the regulatory capital regime of the non-HK jurisdiction as proxies.

² "Not applicable" is reported because the value was not published by the non-HK resolution entity.

1. Key prudential ratios, key metrics, overview of risk management and RWA (continued)

OVA: Overview of risk management

The Group conducts risk assessment in daily operations based on its business activities, sets up risk appetite, and sets risk adjusted return targets as well as different levels of risk limits and key risk indicators (“KRIs”) under the overall risk appetite framework. Via such risk limits and KRIs, the risk appetite is cascaded to business units into corresponding performance indicators, so as to supervise business units to make proper adjustments to the Bank’s operations based on current risk status.

The Group conducts regular assessment on risk management status and risk governance based on regulatory requirements and assesses the Bank’s level of internal capital adequacy accordingly. The key types of risk inherent in the Group’s business include: credit risk, market risk, interest rate risk, liquidity risk, operational risk, technology risk, legal and compliance risk (including anti-money laundering), reputation risk and strategic risk.

The Group’s risk governance structure covers 3 layers: the Board of Directors and its subordinate committees, the senior management and the management level committees, the three lines of defence risk management functions.

- Board of Directors: The Board of Directors represents the interests of shareholders, and is the highest decision-making authority of the Group and has the ultimate responsibility for the oversight of risk management. The Board with the assistance of its committees has the primary responsibilities for the determination of risk management strategies, risk appetite and risk culture, and for ensuring that the Group has an effective risk management system to implement these risk management strategies.
- Senior management: Chief Executive (“CE”) is responsible for managing the various types of risks, and approving material risk exposures or transactions within his authority delegated by the Board. The Deputy Chief Executives (“DCEs”) assist the CE in fulfilling his responsibilities on day-to-day management of various types of risk and are responsible for approving material risk exposures or transactions within their authorities delegated by the CE. The Chief Risk Officer (“CRO”) assists the CE in fulfilling his responsibilities on day-to-day management of various types of risks and internal control; responsible for initiating new risk management strategies, projects and measures in response to regulatory changes that will enable the Group to better monitor and manage any risks that may arise from time to time from new businesses, products and changes in the operating environment and responsible for reviewing material risk exposures or transactions within the delegated authority.

1. Key prudential ratios, key metrics, overview of risk management and RWA (continued)

OVA: Overview of risk management (continued)

- Individual business units (front office): Act as the first line of defence of risk management and are responsible for soliciting business in compliance with the risk management policies and procedures and within various risk limits, and for assessing and monitoring the risk of their business, and ensuring risk data is correctly entered, kept current and aligned with the data definitions.
- Various risk management units (middle office) and supporting units (back office): Act as the second line of defence of risk management. Various risk management units (middle office), which are independent from the business units, are responsible for day-to-day management of different kinds of risks. They have the primary responsibilities for conducting an independent due diligence through identifying, measuring, monitoring and controlling risk to ensure an effective check and balance, as well as drafting various risk management policies and procedures. They are also responsible for reporting the implementation of risk management policies and risk profiles to the Board and the Management and for providing support and recommendations for their decision-making. Supporting units (back office) are responsible for providing proper day-to-day operations support to ensure that there are adequate human resources and systems to support risk management.
- Group Audit: Acts as the third line of defence of risk management, which is responsible for conducting independent checking, and reporting to the Board on the quality of risk management supervision, the adequacy of internal controls and the compliance of internal policies and procedures.

The Group develops comprehensive codes of conduct and has sound management systems in place to enforce them. The standards of conduct are laid down in its risk management policies, and other operating principles and guidelines. All staff are required to follow them when conducting business.

The Group makes use of appropriate training programmes, remuneration, incentive, reward and penalty schemes, assessment and feedback mechanism to guide and drive staff to conduct business in a responsible, honest, practical and proper manner.

The Group's risk management measurement system covers comprehensive quantitative and qualitative indicators of the 8 major risk categories as required by regulator.

Under such system, the Group sets risk appetite and regularly reviews and monitors risk appetite and risk limits based on operating conditions and risk status, and reports regularly to senior management and the Board.

1. Key prudential ratios, key metrics, overview of risk management and RWA (continued)

OVA: Overview of risk management (continued)

Regular risk reporting is made to the senior management and the Board, and such regular reporting covers:

- Implementation status of Group Risk Appetite, risk limits and KRIs
- Risk status of various risk types, major portfolios and exposures
- Major regulatory compliance requirements and implementation status
- Significant risk, compliance and internal control incidents/events
- Matters of concern and main tasks

Ad hoc reporting to senior management and the Board is also conducted based on business needs of risk management and internal control.

Based on regulatory requirements, the Group conducts a variety of stress tests on individual risks and integrated risks each year. The Group also conducts special scenario analysis, sensitivity analysis and stress testing according to emerging issues or by specific areas or businesses. Each stress testing scenario takes into account 3 levels of severity, i.e. mild, moderate, and severe, while different probabilities are applied based on level of severity. Impacts on macroeconomic and market will be evaluated under different scenarios, and impact on Group's risk indicators are also assessed accordingly.

The Bank shall apply stress testing results to various management decisions, including decisions made on strategic businesses, preparation of the business and capital planning, setting of the risk appetite, setting and adjustment of the risk limit, inclusion in the Internal Capital Adequacy Assessment Process ("ICAAP"), performance of liquidity assessment, implementation of remedial actions and recovery plan, etc.

The strategies and processes to manage, hedge and mitigate risks that arise from the AI's business model include:

1. Establishing clear risk management strategies and ensuring that a comprehensive risk management system is in place to identify, assess, monitor and control various kinds of risks.
2. Establishing dedicated risk management units with clear responsibilities to perform independent risk management and control.
3. Establishing effective communication system that enables the "tone of the top" on risk management are communicated to and understood by every employee so that they could comply with BOCHK's risk management strategies.

1. Key prudential ratios, key metrics, overview of risk management and RWA (continued)

OVA: Overview of risk management (continued)

4. Putting in place supporting policies and procedures as well as clear authority structure that guide employees' behaviors and set clear boundaries for actions.
5. Setting the risk appetite of the Group. Empirical and/or quantitative models shall be used to set limits for quantifiable risks (including credit risk, market risk, interest rate risk and liquidity risk) to ensure that exposures to such risks are controlled within acceptable risk levels.
6. Continuously strengthen risk data aggregation capabilities, establishing a comprehensive risk management information system that provides regular and sufficiently detailed reports for the Board and the Management to facilitate their continuous monitoring of the risk profile of the Group as well as the implementation of risk management policies (especially exceptions).
7. Establishing independent internal audit, review and accountability system so as to review and evaluate the implementation of the Group's risk management system.

The Group has established various risk limits and early warning indicators of different types and different approval levels, and regularly monitors and reports implementation status to senior management and the Board. If such indicators approach or breach the early warning level or pre-set limits, timely assessment will be conducted by relevant function units and reported to corresponding approval level, and appropriate mitigation actions will be taken accordingly.

1. Key prudential ratios, key metrics, overview of risk management and RWA (continued)

OV1: Overview of RWA

		(a)	(b)	(c)
		RWA		Minimum capital requirements
		At 31 December 2022	At 30 September 2022	At 31 December 2022
		HK\$'m	HK\$'m	HK\$'m
1	Credit risk for non-securitization exposures	1,108,259	1,106,372	93,559
2	Of which STC approach	87,706	85,688	7,016
2a	Of which BSC approach	-	-	-
3	Of which foundation IRB approach	1,018,225	1,018,273	86,346
4	Of which supervisory slotting criteria approach	2,328	2,411	197
5	Of which advanced IRB approach	-	-	-
6	Counterparty default risk and default fund contributions	9,739	15,379	815
7	Of which SA-CCR approach	9,430	15,079	790
7a	Of which CEM	-	-	-
8	Of which IMM(CCR) approach	-	-	-
9	Of which others	309	300	25
10	CVA risk	3,861	6,064	309
11	Equity positions in banking book under the simple risk-weight method and internal models method	-	-	-
12	Collective investment scheme ("CIS") exposures – LTA	-	-	-
13	CIS exposures – MBA	-	-	-
14	CIS exposures – FBA	-	-	-
14a	CIS exposures – combination of approaches	-	-	-
15	Settlement risk	17	-	1
16	Securitization exposures in banking book	-	-	-
17	Of which SEC-IRBA	-	-	-
18	Of which SEC-ERBA (including IAA)	-	-	-
19	Of which SEC-SA	-	-	-
19a	Of which SEC-FBA	-	-	-
20	Market risk	50,690	22,409	4,055
21	Of which STM approach	1,806	2,255	144
22	Of which IMM approach	48,884	20,154	3,911
23	Capital charge for switch between exposures in trading book and banking book (not applicable before the revised market risk framework takes effect)	Not applicable	Not applicable	Not applicable
24	Operational risk	94,953	98,639	7,596
24a	Sovereign concentration risk	-	-	-
25	Amounts below the thresholds for deduction (subject to 250% RW)	9,120	8,014	730
26	Capital floor adjustment	-	-	-
26a	Deduction to RWA	26,118	27,343	2,089
26b	Of which portion of regulatory reserve for general banking risks and collective provisions which is not included in Tier 2 Capital	-	-	-
26c	Of which portion of cumulative fair value gains arising from the revaluation of land and buildings which is not included in Tier 2 Capital	26,118	27,343	2,089
27	Total	1,250,521	1,229,534	104,976

In this table, RWAs for credit risk calculated under the IRB approach are before the application of the 1.06 scaling factor. Minimum capital requirement represents the amount of capital required to be held for that risk based on its RWAs after any applicable scaling factor multiplied by 8%.

Compared with 30 September 2022, the 37% decrease in RWA of counterparty default risk and default fund contributions was mainly driven by change in outstanding derivative transactions' market value and transaction volume.

LIA: Explanations of differences between accounting and regulatory exposure amounts

The main driver for the differences between accounting values and amounts considered for regulatory purposes is off-balance sheet amounts, which contribute to exposure amounts considered for regulatory purposes but not the carrying value amount under scope of regulatory consolidation.

The Group has an established governance structure and controls framework to ensure that fair values are either determined or validated by control units independent of the front offices. Control units have overall responsibility for independent verification of valuation results from front line businesses and all other significant fair value measurements. Other specific controls include verification of observable pricing inputs; review and approval for new models and changes to models; calibration and back-testing of models against observed market transactions; analysis and investigation of significant daily valuation movements; review of significant unobservable inputs and valuation adjustments. Significant valuation issues are reported to senior management, Risk Committee (“RMC”) and Audit Committee.

The Group chooses appropriate valuation methodologies in corresponding to the nature, position and complexity of treasury products and derivatives. They can be classified into marking-to-market and marking-to-model.

Marking-to-market is valuation of positions by adopting readily available and observable close out prices in the market. If market quotation is not available, marking-to-model should be adopted. Marking-to-model is valuation which has to be benchmarked, extrapolated or otherwise derived from market data inputs.

For marking-to-market, the Group uses the price within the bid-offer spread that is most representative of the fair value of financial instruments, where appropriate, includes using on the residual of the net offsetting risk position of portfolios of financial assets and financial liabilities in cases the Group manages such groups of financial assets and liabilities according to their net market risk exposures.

If the market for assets or liabilities is not active, the Group uses valuation techniques, including the use of recent arm’s length transactions, discounted cash flow analysis, option pricing models and other valuation techniques commonly used by market participants, that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

2. Linkages between financial statements and regulatory exposures (continued)

LIA: Explanations of differences between accounting and regulatory exposure amounts (continued)

Control units independently verify the results of fair value measurements. They source observable data from external independent parties, and compare them to the pricing inputs used in valuation for the financial instruments measured at fair value. If the difference is within a certain pre-set threshold, the selected input is considered as reasonable and can represent current market situation, which supports the conclusion that valuation is reliable.

On top of accounting valuation, the Group conducts liquidity risk adjustments for risk management and regulatory capital adequacy purpose in order to arrive at a prudent value. The Group has continued to consider the liquidity risk adjustment to valuation of less liquid product positions. The appropriateness of the valuation adjustments is reviewed regularly.

2. Linkages between financial statements and regulatory exposures (continued)

PV1: Prudent valuation adjustments

		At 31 December 2022							
		(a)	(b)	(c)	(d)	(e)	(f)	(g)	(h)

CC1: Composition of regulatory capital (continued)

Notes to the Template

Row No.	Description	Hong Kong basis	Basel III basis
		HK\$m	HK\$m
9	Other intangible assets (net of associated deferred tax liabilities)	1,760	-
	<p><u>Explanation</u></p> <p>As set out in paragraph 87 of the Basel III text issued by the Basel Committee (December 2010), mortgage servicing rights ("MSRs") may be given limited recognition in CET1 capital (and hence be excluded from deduction from CET1 capital up to the specified threshold). In Hong Kong, an AI is required to follow the accounting treatment of including MSRs as part of intangible assets reported in the AI's financial statements and to deduct MSRs in full from CET1 capital. Therefore, the amount to be deducted as reported in row 9 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 9 (i.e. the amount reported under the "Hong Kong basis") adjusted by reducing the amount of MSRs to be deducted to the extent not in excess of the 10% threshold set for MSRs and the aggregate 15% threshold set for MSRs, DTAs arising from temporary differences and significant investments in CET1 capital instruments issued by financial sector entities (excluding those that are loans, facilities or other credit exposures to connected companies) under Basel III.</p>		
10	Deferred tax assets (net of associated deferred tax liabilities)	286	-
	<p><u>Explanation</u></p> <p>As set out in paragraphs 69 and 87 of the Basel III text issued by the Basel Committee (December 2010), DTAs of the bank to be realized are to be deducted, whereas DTAs which relate to temporary differences may be given limited recognition in CET1 capital (and hence be excluded from deduction from CET1 capital up to the specified threshold). In Hong Kong, an AI is required to deduct all DTAs in full, irrespective of their origin, from CET1 capital. Therefore, the amount to be deducted as reported in row 10 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 10 (i.e. the amount reported under the "Hong Kong basis") adjusted by reducing the amount of DTAs to be deducted which relate to temporary differences to the extent not in excess of the 10% threshold set for DTAs arising from temporary differences and the aggregate 15% threshold set for MSRs, DTAs arising from temporary differences and significant investments in CET1 capital instruments issued by financial sector entities (excluding those that are loans, facilities or other credit exposures to connected companies) under Basel III.</p>		
18	Insignificant LAC investments in CET1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	-	-
	<p><u>Explanation</u></p> <p>For the purpose of determining the total amount of insignificant LAC investments in CET1 capital instruments issued by financial sector entities, an AI is required to aggregate any amount of loans, facilities or other credit exposures provided by it to any of its connected companies, where the connected company is a financial sector entity, as if such loans, facilities or other credit exposures were direct holdings, indirect holdings or synthetic holdings of the AI in the capital instruments of the financial sector entity, except where the AI demonstrates to the satisfaction of the MA that any such loan was made, any such facility was granted, or any such other credit exposure was incurred, in the ordinary course of the AI's business. Therefore, the amount to be deducted as reported in row 18 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 18 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.</p>		
19	Significant LAC investments in CET1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	-	-
	<p><u>Explanation</u></p> <p>For the purpose of determining the total amount of significant LAC investments in CET1 capital instruments issued by financial sector entities, an AI is required to aggregate any amount of loans, facilities or other credit exposures provided by it to any of its connected companies, where the connected company is a financial sector entity, as if such loans, facilities or other credit exposures were direct holdings, indirect holdings or synthetic holdings of the AI in the capital instruments of the financial sector entity, except where the AI demonstrates to the satisfaction of the MA that any such loan was made, any such facility was granted, or any such other credit exposure was incurred, in the ordinary course of the AI's business. Therefore, the amount to be deducted as reported in row 19 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 19 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.</p>		

3. Composition of regulatory capital (continued)

CC1: Composition of regulatory capital (continued)

Row No.	Description	Hong Kong basis	Basel III basis
		HK\$m	HK\$m
39	Insignificant LAC investments in AT1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	-	-
	<u>Explanation</u> The effect of treating loans, facilities or other credit exposures to connected companies which are financial sector entities as CET1 capital instruments for the purpose of considering deductions to be made in calculating the capital base (see note re row 18 to the template above) will mean the headroom within the threshold available for the exemption from capital deduction of other insignificant LAC investments in AT1 capital instruments may be smaller. Therefore, the amount to be deducted as reported in row 39 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 39 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.		
54	Insignificant LAC investments in Tier 2 capital instruments issued by, and non-capital LAC liabilities of, financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold and, where applicable, 5% threshold)	-	-
	<u>Explanation</u> The effect of treating loans, facilities or other credit exposures to connected companies which are financial sector entities as CET1 capital instruments for the purpose of considering deductions to be made in calculating the capital base (see note re row 18 to the template above) will mean the headroom within the threshold available for the exemption from capital deduction of other insignificant LAC investments in Tier 2 capital instruments and non-capital LAC liabilities may be smaller. Therefore, the amount to be deducted as reported in row 54 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 54 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.		
Remarks: The amount of the 10% threshold and 5% threshold mentioned above is calculated based on the amount of CET1 capital determined in accordance with the deduction methods set out in BCR Schedule 4F. The 15% threshold is referring to paragraph 88 of the Basel III text issued by the Basel Committee (December 2010) and has no effect to the Hong Kong regime.

3. Composition of regulatory capital (continued)

CCA(A): Main features of regulatory capital instruments and non-capital LAC debt instruments (continued)

Note 1:

Pursuant to the Hong Kong Companies Ordinance (Chapter 622) which commenced operation on 3 March 2014, all shares issued by a company incorporated in Hong Kong before, on and after that commencement date shall have no par value and the relevant concept of authorised share capital is abolished.

Note 2:

- The authorised share capital of Bank of China (Hong Kong) Limited (“BOCHK”), comprising 4 million ordinary shares of HK\$100 each, was subdivided into 400 million ordinary shares of HK\$1 each pursuant to shareholders written resolution of BOCHK passed on 3 September 2001.
- On 30 September 2001, 400 million shares in the capital of BOCHK were transferred from Bank of China Limited to BOC Hong Kong (Holdings) Limited (“BOCHK Holdings”) pursuant to Supplemental Merger Agreement.
- BOCHK then issued a total of 42,642,840,858 ordinary shares at par value of HK\$1 each to BOCHK Holdings on 1 October 2001. Hence, the total issued and paid-up share capital of BOCHK was HK\$43,042,840,858 since 2001.
- The concepts of par value for shares and authorised share capital have been abolished following the commencement of the Hong Kong Companies Ordinance (Chapter 622) as mentioned in Note 1.

Note 3:

Contractually, the Additional Tier 1 capital securities are non-convertible.

3. Composition of regulatory capital (continued)

TLAC1(A): LAC composition of material subsidiary (at LAC consolidation group level)

		At 31 December 2022
		(a)
		HK\$m
	Regulatory capital elements of internal loss-absorbing capacity and adjustments	
1	Common Equity Tier 1 ("CET1") capital	229,798
2	Additional Tier 1 ("AT1") capital before LAC adjustments	23,476
3	AT1 capital instruments ineligible as internal loss-absorbing capacity as not issued directly or indirectly to, and held directly or indirectly by, the resolution entity or non-HK resolution entity in the material subsidiary's resolution group	(23,476)
4	Other adjustments	-
5	AT1 capital eligible under the LAC Rules	-
6	Tier 2 ("T2") capital before LAC adjustments	29,048
7	Amortized portion of T2 capital instruments that are internal LAC debt instruments issued directly or indirectly to, and held directly or indirectly by, the resolution entity or non-HK resolution entity in the material subsidiary's resolution group	-
8	T2 capital instruments ineligible as internal loss-absorbing capacity as not issued directly or indirectly to, and held directly or indirectly by, the resolution entity or non-HK resolution entity in the material subsidiary's resolution group	-
9	Other adjustments	-
10	T2 capital eligible under the LAC Rules	29,048
11	Internal loss-absorbing capacity arising from regulatory capital	258,846
	Non-regulatory capital elements of internal loss-absorbing capacity	
12	Internal non-capital LAC debt instruments issued directly or indirectly to, and held indirectly or indirectly by, the resolution entity or non-HK resolution entity in the material subsidiary's resolution group	76,393
17	Internal loss-absorbing capacity arising from non-capital LAC debt instruments before adjustments	76,393
	Non-regulatory capital elements of internal loss-absorbing capacity: adjustments	
18	Internal loss-absorbing capacity before deductions	335,239
19	Deductions of exposures between the material subsidiary's LAC consolidation group and group companies outside that group that correspond to non-capital items eligible for internal loss-absorbing capacity	-
20	Deduction of holdings of its own non-capital LAC liabilities	-
21	Other adjustments to internal loss-absorbing capacity	-
22	Internal loss-absorbing capacity after deductions	335,239
	Risk-weighted amount and exposure measure under the LAC Rules for internal loss-absorbing capacity purposes	
23	Risk-weighted amount under the LAC Rules	1,312,199
24	Exposure measure under the LAC Rules	3,370,353
	Internal LAC ratios and buffers	
25	Internal LAC risk-weighted ratio	25.55%
26	Internal LAC leverage ratio	9.95%
27	CET1 capital (as a percentage of RWA under the Banking (Capital) Rules ("BCR")) available after meeting the LAC consolidation group's minimum capital and LAC requirements	10.93%
28	Institution-specific buffer requirement (capital conservation buffer plus countercyclical capital buffer requirements plus higher loss absorbency requirement, expressed as a percentage of RWA under the BCR)	4.817%
29	Of which: capital conservation buffer requirement	2.500%
30	Of which: institution-specific countercyclical capital buffer requirement	0.817%
31	Of which: higher loss absorbency requirement	1.500%

3. Composition of regulatory capital (continued)

TLAC2: Material subsidiary – creditor ranking at legal entity level

		At 31 December 2022			Sum of values in columns 1 to 2
		Creditor ranking			
		1 (most junior)	1 (most junior)	2 (most senior)	
		HK\$m	HK\$m	HK\$m

6. Liquidity

LIQA: Liquidity risk management

In accordance with the Group's corporate governance principles in respect of risk management, the Board and the RMC, senior management and functional departments/units perform their duties and responsibilities to manage the Group's liquidity risk. The RMC is the decision-making authority of liquidity risk management, and assumes the ultimate responsibility of liquidity risk management. As authorised by the RMC, ALCO exercises its oversight of liquidity risk and ensures the daily operations of the Group are in accordance with the risk appetite and policies as set by the RMC. The RMD is responsible for the Group's liquidity risk management. It cooperates with the Financial Management Department and Investment Management, etc. to assist the ALCO to perform liquidity management functions according to their specific responsibilities.

The Group established liquidity risk management indicators and limits to identify, measure, monitor and control liquidity risk on a daily basis. These indicators and limits include, but are not limited to liquidity coverage ratio ("LCR"), net stable funding ratio ("NSFR"), loan-to-deposit ratio, Maximum Cumulative Cash Outflow ("MCO") and liquidity cushion. The Group applies a cash flow analysis to assess the Group's liquidity condition under normal conditions and also performs a liquidity stress test (including institution specific, general market crisis and combined crisis) and other methods at least on a monthly basis to assess the Group's capability to withstand various severe liquidity crises. Also, relevant management information systems such as the Assets and Liabilities Management System and the Basel Liquidity Ratio Management System are developed to provide data and to prepare for regular management reports to facilitate liquidity risk management duties.

In accordance with the requirements of Supervisory Policy Manual LM-2 "Sound Systems and controls for Liquidity Risk Management" issued by the HKMA, the Group has implemented a behaviour model and assumptions of cash flow analysis and stress test to enhance the Group's cash flow analysis under both normal and stressed conditions. In cash flow analysis under normal circumstances, assumptions have been made relating to on-balance sheet items (such as deposits from customers) and off-balance sheet items (such as loan commitments). According to various characteristics of the assets, liabilities and off-balance sheet items, the Group forecasts the future cash flow based on the contractual maturity date and the assumptions of customer behaviour and balance sheet changes. The Group establishes the MCO indicator which predicts the future 30 days maximum cumulative net cash outflow in normal situations based on the above assumptions, to assess if the Group has sufficient financing capacity to meet the cash flow gap in order to achieve the objective of continuing operations. As at 31 December 2022, before taking the cash inflow through the sale of outstanding marketable securities into consideration, BOCHK's 30-day cumulative cash flow was a net cash inflow, amounting to HK\$159,722 million and was in compliance with the internal limit requirements.

6. Liquidity (continued)

LIQA: Liquidity risk management (continued)

The Group is committed to diversify the sources, tenors and use of funding to avoid excessive concentration of assets and liabilities; and prevent triggering liquidity risk due to the break of funding strand resulting from over-concentration of sources and use of funding in a particular area where problems occur. In order to manage such risk, the Group sets concentration limits on collateral pools and sources of funding such as Tier 1 high-quality readily liquefiable assets to total high-quality readily liquefiable assets ratio, top ten depositors ratio and large depositors ratio. Whenever necessary, the Group could improve the liquidity position by taking mitigation actions including, but not limited to obtaining funding through interbank borrowings or repos in the money market, selling bonds in the secondary market or retaining existing and attracting new customer deposits. Apart from increasing the funding, the Group would maintain good communication with the counterparties, the parent bank and the regulators to enhance mutual confidence.

In the liquidity stress test, institution specific, general market crisis and combined crisis scenarios have been set up, a combined crisis scenario is a combination of institution specific and general market crisis to assess the Group's capability to withstand a more severe liquidity crisis, with a more stringent set of assumptions being adopted.

A contingency plan is being established which details the conditions to trigger the plan based on stress test results and early warning indicators, the action plans and relevant procedures and responsibility of relevant departments.

The Group has established a set of uniform liquidity risk management policies which serve as standards and guidance to all the Group's members for liquidity risk management. On the basis of the Group's uniform policies, each of the subsidiaries develops its own liquidity management policies according to its own characteristics, and assumes its own liquidity risk management responsibility. Subsidiaries are required to report their respective liquidity positions with relevant liquidity ratios on a regular basis to the RMD of BOCHK, which consolidates this information and evaluates group-wide liquidity risk to ensure relevant requirements are satisfied.

6. Liquidity (continued)

LIQA: Liquidity risk management (continued)

Under normal circumstances, the intra-group funding transactions between BOCHK and Southeast Asian entities are mainly through interbank placement. As at 31 December 2022, the net funding provided by BOCHK were as follows (positive indicates net placement, negative indicates net borrowing):

	At 31 December 2022
	HK\$m
Southeast Asian entities	
BOC Malaysia	3,384
BOC Thailand	(204)
Manila Branch	631
Jakarta Branch	1,529
Ho Chi Minh City Branch	(936)
Vientiane Branch	(1,988)
Phnom Penh Branch	2,496
Brunei Branch	(773)
Yangon Branch	(419)

As at 31 December 2022, the maturity analysis based on the remaining period at balance sheet date to the contractual maturity date is as follows:

	At 31 December 2022			
	Within one year	One to five years	Over five years	Indefinite
	HK\$m	HK\$m	HK\$m	HK\$m
Total on-balance sheet assets	1,963,325	985,422	471,846	70,329
Total on-balance sheet liabilities	(3,067,363)	(104,988)	(8,916)	-
Net liquidity gap	(1,104,038)	880,434	462,930	70,329

The net liquidity gap of off-balance sheet items is mainly within one year.

7	<i>Unsecured wholesale funding (other than small business funding) not covered in row 6</i>	727,729	395,966
8	<i>Debt securities and prescribed instruments issued by the AI and redeemable within the LCR period</i>	-	-
9	Secured funding transactions (including securities swap transactions)		99
10	Additional requirements, of which:	467,573	80,576
11	<i>Cash outflows arising from derivative contracts and other transactions, and additional liquidity needs arising from related collateral requirements</i>	35,859	35,690
12	<i>Cash outflows arising from obligations under structured financing transactions and repayment of funding obtained from such transactions</i>	-	-
13	<i>Potential drawdown of undrawn committed facilities (including committed credit facilities and committed liquidity facilities)</i>	431,714	44,886
14	Contractual lending obligations (not otherwise covered in Section B) and other contractual cash outflows	70,521	70,521
15	Other contingent funding obligations (whether contractual or non-contractual)	347,060	3,411
16	Total Cash Outflows		732,008
C. Cash Inflows			
17	Secured lending transactions (including securities swap transactions)	19,277	8,865
18	Secured and unsecured loans (other than secured lending transactions covered in row 17) and operational deposits placed at other financial institutions	296,054	193,583
19	Other cash inflows	66,969	62,887
20	Total Cash Inflows	382,300	265,335
D. Liquidity Coverage Ratio			Adjusted value
21	Total HQLA		829,726
22	Total Net Cash Outflows		466,673
23	LCR (%)		178.49%

6. Liquidity (continued)

LIQ1: Liquidity Coverage Ratio – for category 1 institution (continued)

Notes:

- The weighted amount of HQLA is to be calculated as the amount after applying the haircuts as required under the Banking (Liquidity) Rules.
- The unweighted amounts of cash inflows and cash outflows are to be calculated as the principal amounts in the calculation of the LCR as required under the Banking (Liquidity) Rules.
- The weighted amounts of cash inflows and cash outflows are to be calculated as the amounts after applying the inflow and outflow rates as required under the Banking (Liquidity) Rules.
- The adjusted value of total HQLA and the total net cash outflows have taken into account any applicable ceiling as required under the Banking (Liquidity) Rules.

The Group's average LCR of each quarter in 2022 were 159.16%, 149.49%, 149.00% and 178.49% respectively, continuously maintained at stable and healthy level.

The HQLA consists of cash, balances at central banks and high quality marketable securities issued or guaranteed by sovereigns, central banks, public sector entities or multilateral development banks and non-financial corporate debt securities. The majority of the HQLA was composed of Level 1 HQLA.

The net cash outflow was mainly from retail and corporate customer deposit which are the Group's primary source of funds, together with deposit and balance from bank and other financial institution. To ensure stable, sufficient and diversified source of funds, the Group actively attracts new deposits, keeps the core deposit and obtains supplementary funding from the interbank market or by issuing debts in the capital market. Other cash outflow, such as commitment, cash outflow under derivative contract and potential collateral requirement, had a minimal impact to the LCR.

The majority of the Group's customer deposits are denominated in HKD, USD and RMB. As the supply of HQLA denominated in HKD in the market is relatively limited, the Group exchanges surplus funds in HKD for USD and other currencies through swap transactions, part of which being used for investment in HQLA.

7. Credit risk for non-securitization exposures

CRA: General information about credit risk

Credit risk is the risk of loss that a customer or counterparty is unable to or unwilling to meet its contractual obligations. Credit risk exists in the trading book and banking book, as well as from on- and off-balance sheet transactions of the Group. It arises principally from lending, trade finance and treasury businesses.

The Group has formulated a comprehensive set of credit risk management policies and procedures, and appropriate credit risk limits to manage and control credit risk that may arise. These policies, procedures and credit risk limits are regularly reviewed and updated to cope with changes in market conditions and business strategies.

The Group's organisation structure establishes a clear set of authority and responsibility for monitoring compliance with policies, procedures and limits.

The Board delegates credit approval authority to the CE. The CE can further delegate to the subordinates within his limit authorised by the Board. The Group sets the limits of credit approval authority according to the credit business nature, rating, the level of transaction risk, and the extent of the credit exposure.

The Chief Credit Officer, who reports directly to the CRO, takes charge of credit risk management and is also responsible for the control of credit risk exposures of subsidiaries in line with the credit risk management principles and requirements set by the Group. Various units of the Group have their respective credit risk management responsibilities. Business units act as the first line of defence in risk management. The Risk Management Department ("RMD"), which is independent from the business units, is responsible for the day-to-day management of credit risks and provides an independent due diligence through identifying, measuring, monitoring and controlling credit risk to ensure an effective checks and balances, as well as drafting, reviewing and updating credit risk management policies and procedures. It is also responsible for the design, development and maintenance of the Group's internal rating system and ensures the system complies with the relevant regulatory requirements. Back offices are responsible for credit administration, providing operations support and supervision on the implementation of prerequisite terms and conditions of credit facilities.

The Group Audit is responsible for conducting independent reviews on the adequacy and effectiveness of credit risk management framework, as well as the compliance to internal policies and procedures.

The RMD provides regular credit management information reports and ad hoc reports to the Management Committee ("MC"), the RMC and the Board to facilitate their continuous monitoring of credit risk.

7. Credit risk for non-securitization exposures (continued)

CRA: General information about credit risk (continued)

In addition, the Group identifies credit concentration risk by industry, geography, customer or counterparty. The Group monitors changes to every counterparties credit risk, quality of the credit portfolio and credit risk concentrations, and reports regularly to the Group's Management.

CR1: Credit quality of exposures

		At 31 December 2022						
		(a)	(b)	(c)	(d)	(e)	(f)	(g)
		Gross carrying amounts of		Allowances/ impairments	Of which ECL accounting provisions for credit losses on STC approach exposures		Of which ECL accounting provisions for credit losses on IRB approach exposures	Net values (a+b-c)
		Defaulted exposures	Non-defaulted exposures		Allocated in regulatory category of specific provisions	Allocated in regulatory category of collective provisions		
		HK\$m	HK\$m		HK\$m	HK\$m		
1	Loans	7,885	2,161,019	(11,559)	(1,636)	(1,001)	(8,922)	2,157,345
2	Debt securities	-	887,658	(61)	-	(29)	(32)	887,597
3	Off-balance sheet exposures	264	778,109	(490)	(37)	(55)	(398)	777,883
4	Total	8,149	3,826,786	(12,110)	(1,673)	(1,085)	(9,352)	3,822,825

The Group identifies the exposures as "default" if the exposure is past due for more than 90 days or the borrower is unlikely to pay in full for the credit obligations to the Group.

CR2: Changes in defaulted loans and debt securities

		(a)
		HK\$m
1	Defaulted loans and debt securities at 30 June 2022	6,896
2	Loans and debt securities that have defaulted since the last reporting period	1,589
3	Returned to non-defaulted status	(36)
4	Amounts written off	(378)
5	Other changes	(186)
6	Defaulted loans and debt securities at 31 December 2022	7,885

The increase in defaulted exposures in the current reporting period was due to default of a few corporate loans.

7. Credit risk for non-securitization exposures (continued)

CRB: Additional disclosure related to credit quality of exposures

Exposures with a specific repayment date are classified as overdue when the principal or interest is past due and remains unpaid. Advances repayable by regular instalments are classified as overdue when an instalment payment is past due and remains unpaid. Advances repayable on demand are classified as overdue either when a demand for repayment has been served on the borrower but repayment has not been made in accordance with the instruction or when the advances have remained continuously to exceed the approved limit that was advised to the borrower.

For exposures under both FIRB and STC approaches, ECL is assessed in three stages and the exposures are classified in one of the following three stages:

Stage 1: if the financial instruments are not credit-impaired during origination and their credit risk has not increased significantly since origination, and the impairment allowance is measured at an amount up to 12-month ECL;

Stage 2: if the financial instruments are not credit-impaired during origination but their credit risk has increased significantly since origination, and the impairment allowance is measured at an amount equal to the lifetime ECL;

Stage 3: if the financial instruments are credit-impaired and their future cash flows of that financial instruments are adversely affected by one or more events, and the impairment allowance is also measured at an amount equal to the lifetime ECL.

Rescheduled advances are those advances that have been restructured and renegotiated between the bank and borrowers because of deterioration in the financial position of the borrower or the inability of the borrower to meet the original repayment schedule, and the revised repayment terms, either of interest or the repayment period, are “non-commercial” to the Group.

CRC: Qualitative disclosures related to credit risk mitigation

The Group's policies and procedures stipulate the counterparty credit risk management and the netting should only be applied where there is a legal right to do so. Recognised netting can only be done pursuant to a valid bilateral netting agreement in accordance with the Banking (Capital) Rules section 209. The Group adopts the netting approach which is consistent with the Banking (Capital) Rules for capital adequacy purposes, and only those OTC derivative transactions subject to valid bilateral netting agreements are eligible for netting approach.

The Group has in place specific policies with respect to revaluation and management of collateral. These policies articulate the standards to monitor and manage the collateral's security as the secondary repayment source and recovery of obligation loss. All collaterals are revalued on a regular basis. More frequent revaluation is required for collaterals with higher volatility or deteriorated accounts.

The credit risk concentration within the credit risk mitigation (recognised collateral and guarantees for capital calculation) used by the Group is under a low level.

7. Credit risk for non-securitization exposures (continued)

CRD: Qualitative disclosures on use of ECAI ratings under STC approach

The ECAIs recognised by the Group include Standard & Poor's, Moody's and Fitch.

The Group adopts STC approach based on external credit rating (where applicable) to determine the risk weight of the small residual credit exposures that was approved by the HKMA to be exempted from FIRB approach and the main exposures are listed as below:

- Exposures to Sovereign
- Exposures to Public sector entity
- Exposures to Multilateral development bank

The Group performs the ECAI issuer ratings mapping to its exposures in banking book in accordance with Part 4 of the Banking (Capital) Rules.

7. Credit risk for non-securitization exposures (continued)

CRE: Qualitative disclosures related to internal models for measuring credit risk under IRB approach

The internal model developments, controls and changes are complied with the regulatory requirements of Banking (Capital) Rules by the HKMA. The Group establishes the model standards to govern the process for the initial development, the approval and the implementation of the internal rating system, as well as the procedures for monitoring and reporting of the model performance.

To ensure the discriminatory power, accuracy and stability of the rating systems meet regulatory and management requirements, review of a rating model will be triggered if the performance of the model deteriorates materially against pre-determined tolerance limit.

The model development and maintenance unit of the RMD is responsible for developing, maintaining and changing internal rating models. The model validation unit of the RMD is responsible for independent validation of internal rating models.

The implementation of initial IRB models and the subsequent material changes of models are approved by the Risk Committee of the Board on the recommendation of the Asset and Liability Management Committee (“ALCO”).

The RMD as a credit risk control unit is responsible for the design, selection, testing and implementation, oversight of the effectiveness, as well as related monitoring and review of an internal rating system.

Internal audit reviews at least annually the internal rating system (including the validation process and the estimation of the risk components) and the operations of the related credit risk control unit. The audit purpose is to verify the control mechanism over the internal rating system is functioning as intended.

Comprehensive validation of all internal rating models is carried out by Model Validation Team that is functionally independent of model development, maintenance unit and business units. The validation findings and conclusions will be submitted directly to the Group’s senior management and the Risk Committee.

Internal rating models are validated at least once a year. If material changes in the market environment or business activities are considered to have potentially significant impact on effectiveness of IRB system, prompt validation will be conducted accordingly.

For newly-developed or revised internal rating models, independent validation should be carried out before the model is submitted to the Risk Committee for approval for implementation. The validation opinions will be submitted together with the model development documentation for consideration in the model approval process.

7. Credit risk for non-securitization exposures (continued)

CRE: Qualitative disclosures related to internal models for measuring credit risk under IRB approach (continued)

On an ongoing basis, regular validation reports are endorsed by the Risk Committee. Significant findings of model weakness are reported to the senior management and the Risk Committee. Corresponding remedial actions are taken by the model development and maintenance unit, and followed up by the validation unit, which is also governed by the Risk Committee and senior management.

The scope of reporting related to credit risk models covers the assessment on the discriminatory power, accuracy and stability of the rating systems, the use of rating overrides and its reason analysis, the major findings during the model review and validation.

The Group adopts the FIRB approach to calculate the regulatory capital requirements for most of the corporate and bank exposures, and adopts the supervisory slotting criteria approach to project finance exposures under specialised lending. The Group adopts retail IRB approach for retail exposures to individuals and small businesses.

The following table summarised the portion of total EAD within the Group covered by the STC approach and IRB approaches:

Portfolio	STC approach (% in EAD)	IRB approaches		
		Foundation IRB approach (% in EAD)	Retail IRB approach (% in EAD)	Specific Risk Weight approach (% in EAD)
Sovereign	100%	-	-	-
Bank	4%	96%	-	-
Corporate	4%	96%	-	-
Retail	2%	-	98%	-
Equity	100%	-	-	-
Other	2%	-	-	98%

Description of Internal rating models

The models in portfolios are categorised mainly by product nature or obligor types. The main differences among the models are the reflection of the risk characteristics (e.g. secured or unsecured products, and obligors with different sales turnover, exposure size and industry, etc.). For project finance exposures under specialised lending, the rating is assigned by the project finance model based on the characteristics of borrowers and transactions.

7. Credit risk for non-securitization exposures (continued)

CRE: Qualitative disclosures related to internal models for measuring credit risk under IRB approach (continued)

IRB models – Bank and Corporate

Probability of Default (“PD”) models

- PD represents the likelihood of a default event in a one-year horizon.

Portfolio	Model	Number of Models	Key Model Characteristics	Regulatory Floors Applied
Bank (Banks and regulated securities firms)	PD	2	PD models are developed based on historical data and market benchmarking data, combining both quantitative and qualitative data on latest financial performance, management quality, industry risks, group connection and negative warning signals of each obligor.	0.03%
Corporate (Large corporates, medium corporates, real estate developers, real estate investors, insurance companies, object finance and project finance)	PD	7		0.03%

IRB models – Retail

The Group uses statistical models to provide estimated probability of default (“PD”), loss given default (“LGD”) and exposure at default (“EAD”) for retail exposures under retail IRB approach.

Probability of Default (“PD”) models

- PD represents the likelihood of a default event in a one-year horizon.
- PD models incorporate the characteristics of obligors, facility types, and the obligor’s account behavior.

Loss Given Default (“LGD”) models

- LGD estimates the potential loss of each credit exposure if the obligor defaults.
- LGD is mainly determined by the characteristics of facility, collateralisation, loss recovery and the associated costs. Downturn LGD takes into account of the recoveries experience in the historical downturn situation. The determination of the time lapse between the default event and the closure of the exposure is based on empirical data and expert judgement.

Exposure at Default (“EAD”) models

- EAD estimates the additional drawn down on the undrawn facility, if any, after the facility defaulted.
- In modeling the credit conversion factors (“CCF”), fixed horizon method has been used and the horizon chosen is 12 months. For the estimation of CCF for facilities of off-balance sheet exposures such as the undrawn portion of credit lines, CCF estimation considered the factors such as utilisation rate.

7. Credit risk for non-securitization exposures (continued)

CRE: Qualitative disclosures related to internal models for measuring credit risk under IRB approach (continued)

Portfolio	Model	Number of Models	Key Model Characteristics	Regulatory Floors Applied
Residential Mortgage (To individuals and property holding shell companies)	PD	1	Calibrated to a long-run default rate from the score based on obligor's characteristics and internal behavioral data.	0.03%
	LGD	1	Pooling based on the factors such as collateral type and LTV, etc. A conservative LGD is estimated for the economic downturn period based on the historical data.	10%
	EAD	1	Based on the outstanding balance. For the accounts denominated in foreign currency, EAD will be adjusted to consider the increasing of EAD due to the appreciation of the foreign currency.	At least be equal to the current outstanding balance
Other Retail Exposure to individuals (non-credit card)	PD	3	Calibrated to a long-run default rate from the score based on the facility type and internal behavioral data.	0.03%
	LGD	3	Pooling based on the factors such as facility type, collateral type and LTV, etc. A conservative LGD is estimated for the economic downturn period based on the historical data.	Nil
	EAD	3	For revolving facilities, utilisation ratio is derived to determine the EAD. For reducing balance facilities, EAD is based on the outstanding balance. For the accounts denominated in foreign currency, EAD will be adjusted to consider the increasing of EAD due to the appreciation of the foreign currency.	At least be equal to the current outstanding balance
Credit Card	PD	1	Calibrated to a long-run default rate from the score based on obligor's characteristics and internal behavioral data.	0.03%
	LGD	1	A conservative LGD is estimated for the economic downturn period based on the historical data.	Nil
	EAD	1	Utilisation ratio is derived to determine the EAD. For the accounts denominated in foreign currency, EAD will be adjusted to consider the increasing of EAD due to the appreciation of the foreign currency.	At least be equal to the current outstanding balance

7. Credit risk for non-securitization exposures (continued)

CRE: Qualitative disclosures related to internal models for measuring credit risk under IRB approach (continued)

Portfolio	Model	Number of Models	Key Model Characteristics	Regulatory Floors Applied
Small Business Retail	PD	1	Calibrated to a long-run default rate from the combination of financial assessment, qualitative assessment to the obligor and the internal behavioral data.	0.03%
	LGD	1	Pooling based on the factors such as facility type and LTV, etc. A conservative LGD is estimated for the economic downturn period based on the historical data.	Nil
	EAD	1	CCF is estimated to determine the EAD. For reducing balance facilities, EAD is based on the outstanding balance.	At least be equal to the current outstanding balance

[^] Use of preferential risk-weights.

III. Equity exposures under simple risk-weight method

The Group did not use simple risk-weight method to measure equities exposures as at 31 December 2022.

8. Counterparty credit risk

CCRA: Qualitative disclosures related to counterparty credit risk (including those arising from clearing through CCPs)

The Group's management objective to counterparty credit risk is to ensure credit risk is properly managed and controlled within the general credit risk management framework. The Group has also formulated relevant policy which covers identification, measurement, control and monitoring of counterparty credit risk.

The Group establishes credit limit through formal credit approval procedures to control the pre-settlement credit risk arising from derivative transactions and settlement limit to control the settlement risk arising from foreign exchange-related transactions for counterparties including CCP in both the trading book and banking book. The Group monitors the risk exposure due to market fluctuations by using the replacement cost and the potential exposure value of the transactions.

The Group establishes prudent eligibility criteria and haircut policy of debt securities being pledged as collateral for securities financing transactions.

In controlling and monitoring of wrong-way risk (risk of existence of positive correlation between the PD of a counterparty and credit exposures driven by mark-to-market value of the underlying transactions), specific wrong-way risk transactions are generally not allowed; monitoring measures have been formulated for those counterparties that would be exposed to potential general wrong-way risk being identified by making use of internal risk management tools.

Based on the existing ISDAs and CSAs signed with BOCHK's counterparties, there is no impact on collateral amount that BOCHK would be required to provide given a credit rating downgrade.

8. Counterparty credit risk (continued)

CCR1: Analysis of counterparty default risk exposures (other than those to CCPs) by approaches

		At 31 December 2022					
		(a)	(b)	(c)	(d)	(e)	(f)
		Replacement cost (RC)	PFE	Effective EPE	Alpha (α) used for computing default risk exposure	Default risk exposure after CRM	RWA
		HK\$m	HK\$m	HK\$m		HK\$m	HK\$m
1	SA-CCR approach (for derivative contracts)	3,313	11,834		1.4	21,206	9,430
1a	CEM (for derivative contracts)	-	-		1.4	-	-
2	IMM(CCR) approach			-	-	-	-
3	Simple approach (for SFTs)					-	-
4	Comprehensive approach (for SFTs)					49,923	46
5	VaR (for SFTs)					-	-
6	Total						9,476

Compared with 30 June 2022, the 48% decrease in SA-CCR's default risk exposure after CRM was mainly driven by change in outstanding transactions' market value and decrease in outstanding transaction volume. The 34% decrease in SFTs' default risk exposure after CRM was mainly driven by decrease in outstanding transaction volume.

CCR2: CVA capital charge

		At 31 December 2022	
		(a)	(b)
		EAD post CRM	RWA
		HK\$m	HK\$m

	100.00 (Default)	-	-	-	-	-	-	-
Sub-total	-	-	-	-	-	-	-	
Total (sum of all portfolios)		68,097	0.12	300	12	1.03	7,393	11

Compared with 30 June 2022, the 55% decrease in RWA of “Portfolio (ii) – Bank” was mainly due to decrease in “EAD post-CRM”.

8. Counterparty credit risk (continued)

CCR5: Composition of collateral for counterparty default risk exposures (including those for contracts or transactions cleared through CCPs)

	At 31 December 2022					
	(a)	(b)	(c)	(d)	(e)	(f)
	Derivative contracts				SFTs	
	Fair value of recognized collateral received		Fair value of posted collateral		Fair value of recognized collateral received	Fair value of posted collateral
	Segregated	Unsegregated	Segregated	Unsegregated		
HK\$m	HK\$m	HK\$m	HK\$m	HK\$m	HK\$m	
Cash	-	20,796	-	8,911	31,751	21,174
Debt securities	-	-	-	3,251	21,976	46,744
Equity securities	-	-	-	-	243	-
Total	-	20,796	-	12,162	53,970	67,918

Compared with 30 June 2022, the 29% decrease in fair value of recognised collateral received (unsegregated) and 14% increase in fair value of posted collateral (unsegregated) under derivative contracts were mainly driven by change in outstanding transactions' market value and outstanding transaction volume.

The 29% decrease in fair value of recognised collateral received and 10% decrease in fair value of posted collateral under SFTs were mainly driven by change in outstanding transaction volume.

CCR6: Credit-related derivatives contracts

	At 31 December 2022	
	(a)	(b)
	Protection bought	Protection sold
	HK\$m	HK\$m

Negative fair value (liability)	-	-

CCR7: RWA flow statements of default risk exposures under IMM(CCR) approach

The Group did not use IMM(CCR) approach to measure default risk exposures as at 31 December 2022.

8. Counterparty credit risk (continued)

CCR8: Exposures to CCPs

		At 31 December 2022	
		(a)	(b)
		Exposure after CRM	RWA
		HK\$m	HK\$m
1	Exposures of the AI as clearing member or clearing client to qualifying CCPs (total)		263
2	Default risk exposures to qualifying CCPs (excluding items disclosed in rows 7 to 10), of which:	6,313	132
3	(i) OTC derivative transactions	5,749	120
4	(ii) Exchange-traded derivative contracts	564	12
5	(iii) Securities financing transactions	-	-
6	(iv) Netting sets subject to valid cross-product netting agreements	-	-
7	Segregated initial margin	-	
8	Unsegregated initial margin	1,083	30
9	Funded default fund contributions	258	101
10	Unfunded default fund contributions	-	-
11	Exposures of the AI as clearing member or clearing client to non-qualifying CCPs (total)		-
12	Default risk exposures to non-qualifying CCPs (excluding items disclosed in rows 17 to 20), of which:	-	-
13	(i) OTC derivative transactions	-	-
14	(ii) Exchange-traded derivative contracts	-	-
15	(iii) Securities financing transactions	-	-
16	(iv) Netting sets subject to valid cross-product netting agreements	-	-
17	Segregated initial margin	-	
18	Unsegregated initial margin	-	-
19	Funded default fund contributions	-	-
20	Unfunded default fund contributions	-	-

Compared with 30 June 2022, the 31% increase in qualifying CCPs RWA was mainly driven by change in outstanding transaction volume.

9. Securitization exposures

SECA: Qualitative disclosures related to securitization exposures

The Group has not sponsored or managed or provided implicit support to securitisation exposures and does not hold any re-securitisation exposures as at 31 December 2022.

SEC1: Securitization exposures in banking book

There was no securitisation exposure in the banking book as at 31 December 2022.

SEC2: Securitization exposures in trading book

There was no securitisation exposure in the trading book as at 31 December 2022.

SEC3: Securitization exposures in banking book and associated capital requirements – where AI acts as originator

There was no securitisation exposure in the banking book and the associated capital requirements where the Group acts as an originator as at 31 December 2022.

SEC4: Securitization exposures in banking book and associated capital requirements – where AI acts as investor

There was no securitisation exposure in the banking book and the associated capital requirements where the Group acts as an investor as at 31 December 2022.

10. Market risk

MRA: Qualitative disclosures related to market risk

Market Risk

Market risk refers to the risk of loss arising from movements in the value of foreign exchange, interest rate, equity and commodity positions held by the Group due to the volatility of financial market price (foreign exchange rate, interest rate, credit spreads, equity price, commodity price).

Market Risk Governance

The Group's market risk management is intended to ensure proper oversight of market risk, assure market risk taking activities are consistent with our risk appetite while optimising risk and return. In accordance with the Group's corporate governance principles in respect of risk management, the Board and RMC, senior management and functional departments/units perform their duties and responsibilities to manage the Group's market risk. The RMD is responsible for the Group's market risk management, assisting senior management to perform their day-to-day duties, independently monitoring the market risk profile and compliance of management policies and limits of the Group and BOCHK, and ensuring that the aggregate and individual market risks are within acceptable levels. The Group's risk management report is submitted to the senior management and RMC on a monthly basis.

The Group's market risk management covers BOCHK and its subsidiaries. The Group establishes market risk management policies to regulate BOCHK's and its subsidiaries' market risk management; meanwhile, the Group sets up the Group's VaR and stress test limits, which are allocated and monitored across the Group according to the business requirements and risk tolerance levels. In line with the requirements set in the Group's policy, the subsidiaries formulate the detailed policies and procedures and are responsible for managing their daily market risk.

The Group sets up market risk indicators and limits to identify, measure, monitor and control market risk. Major risk indicators and limits include but are not limited to VaR, Stop Loss, Open Position, Stress Testing and Sensitivity Analysis (Basis Point Value, Greeks), etc. Trading market risks are managed holistically at the portfolio level on a daily basis. Global Markets may utilise hedging strategies to manage risk within set limits. Hedging may lead to basis risks – due to less than perfect correlation between the hedging instrument in question and the position to be hedged, which are managed within the overall limits. As such, the RMD does not distinguish between specific positions and their respective hedges.

Market risk limits are established for the Group, individual entities, business unit and at granular levels within the business lines, reflecting the nature and magnitude of the market risks. Major risk indicators and limits are classified into three levels, and are approved by the RMC, senior management or the head of the respective business unit respectively. Regular review of the market risk limits should be conducted at least once a year. The treasury business units of BOCHK and subsidiaries (as for Group Limit) are required to conduct their business within approved market risk indicators and limits.

10. Market risk (continued)

MRB: Additional qualitative disclosures for AI using IMM approach

The Group continues to adopt the internal models (“IMM”) approach to calculate the general market risk capital charge for foreign exchange and interest rate exposures and, with the approval from the HKMA, exclude its structural FX positions in the calculation of the market risk capital charge. The Group continues to adopt the standardised (market risk) (“STM”) approach to calculate the market risk capital charge for the remaining exposures. Regulatory VaR and stressed VaR models are adopted to use in the Group and BOCHK.

Regulatory VaR and stressed VaR for determining market risk capital requirements are calculated at a 99% confidence level for a 10-day holding period. The stressed VaR uses the same methodology as the VaR model and is generated with inputs calibrated to the historical market data from a continuous 12-month period of significant financial stress relevant to the Group's portfolio. For management purposes, the Group uses 1-day 99% VaR to measure and report general market risks of the Group and subsidiaries, and sets up the VaR limit of the Group and subsidiaries.

Directly modeled 10-day holding period is used in the calculation of regulatory VaR, whereby two-year historical observations are equally weighted. Absolute returns are used for interest rates; logarithmic returns are used for foreign exchange rates and implied volatilities under historical simulation, where the data are updated daily.

Stressed VaR model is based on a directly modeled 10-day holding period, which is same as regulatory VaR model. Based on the assessment at the most volatile period in recent history, relevant historical crises are first identified. With further assessment, January 2008 to December 2008 is chosen as the stress period in calculating stressed VaR. The period used is approved by the HKMA and regularly reviewed.

Full revaluation approach is used in both VaR and stressed VaR model. Specific risk charge is calculated as a standalone charge by using a different method (i.e. Standardised approach). It is aggregated by simple sum with the VaR and stressed VaR contributions when computing the market risk capital charge.

The Group adopts back-testing to measure the accuracy of VaR model results. The back-testing compares the calculated VaR figure of market risk positions of each business day with the actual and hypothetical gains or losses arising from those positions on the next business day. Generally speaking, the number of back-testing exceptions in a rolling 12-month period will not exceed four times, given a 99% confidence level.

10. Market risk (continued)

MR1: Market risk under STM approach

		At 31 December 2022
		(a)
		RWA
		HK\$m
	Outright product exposures

10. Market risk (continued)

MR4: Comparison of VaR estimates with gains or losses

Regulatory VaR and stressed VaR for determining market risk capital requirements are calculated at a 99% confidence level for a 10-day holding period. The stressed VaR uses the same methodology as the VaR model and is generated with inputs calibrated to the historical market data from a continuous 12-month period of significant financial stress relevant to the Group's portfolio.

The Group adopts a regulatory VaR model, using a historical simulation approach and two years of historical data, to capture general interest rate and foreign exchange risks over a 10-day holding period with a 99% confidence level. The Group adopts back-testing to measure the accuracy of VaR model results. Actual and hypothetical P&L are compared against the corresponding 99% one-day regulatory VaR. The numbers of exception over the recent 250 business days (actual or hypothetical P&L exceeds the VaR) determines the value of VaR multiplication factor.

Actual P&Ls are the P&Ls in respect to trading activities within the scope of regulatory VaR model, which includes intraday P&Ls; excludes commissions, fees and reserves. Hypothetical P&Ls are the hypothetical changes in portfolio value assuming unchanged end-of-day position.

Six exceptions were noted in hypothetical P&L back-testing on 26 October, 9 November, 30 November, 6 December, 13 December and 20 December (excess amount: HK\$3.9 million, HK\$26.3 million, HK\$47.1 million, HK\$30.2 million, HK\$24.5 million and HK\$21.2 million respectively) in the second-half of 2022. Two exceptions were noted in actual P&L back-testing on 29 September and 6 December (excess amount: HK\$15.5 million and HK\$24.7 million respectively). The exceptions were driven by unexpected market movements.

11. Interest rate risk in banking book

IRRBB: Interest rate risk in banking book – risk management objectives and policies

The Group's risk management framework applies also to interest rate risk management. The ALCO exercises its oversight of interest rate risk in accordance with the "BOCHK Group Banking Book Interest Rate Risk Management Policy" approved by the RMC. The RMD is responsible for the Group's interest rate risk management. With the cooperation of the Financial Management Department and Investment Management, etc., RMD assists the ALCO to perform day-to-day interest rate risk management. Its roles include, but are not limited to, the formulation of management policies, selection of methodologies, setting of risk indicators and limits, assessment of target balance sheet, monitoring of the compliance with policies and limits, and submission of interest rate risk management reports to senior management and the RMC, etc.

Interest rate risk in banking book ("IRRBB") refers to the risk of losses in terms of overall earnings and economic value of the banking book due to the adverse movement of the interest rate level, or change to the balance sheet structure.

The major types of interest rate risk of the Group are:

- Gap risk: mismatches in the maturity or repricing periods of assets and liabilities that may affect net interest income and economic value;
- Basis risk: different pricing basis for different transactions resulting that the yield on assets and cost of liabilities may change by different amounts within the same repricing period; and
- Option risk: exercise of the options embedded in assets, liabilities or off-balance sheet items that can cause a change in the cash flows of assets and liabilities.

The Group sets out interest rate risk indicators and limits to identify, measure, monitor and control interest rate risk on a daily basis. The key indicators and limits include, but are not limited to, repricing gap limits, basis risk, duration, price value of a basis point ("PVBP"), net interest income sensitivity ratio ("NII"), economic value sensitivity ratio ("EVE"), etc. The key indicators and limits are classified into different levels, which are approved by the CFO, CRO, ALCO and RMC accordingly. Risk-taking business units are required to conduct their business within the boundary of the interest rate risk limits. Based on the limit requirements and business conditions, when necessary, the Group can hedge (economic hedging or hedge accounting) or mitigate the IRRBB by holding one or more hedging tools that are opposite to the original risk position. Before launching a new product or business in the banking book, the relevant units are required to go through a risk assessment process, which includes the assessment of underlying interest rate risk and consideration of the adequacy of current risk monitoring mechanism. Any material impact on interest rate risk noted during the risk assessment process will be submitted to the RMC for approval. The Group Audit, assuming the roles of third line of defence of the Group, performs internal audit on the Group's IRRBB management process independently in accordance with the annual audit plan.

11. Interest rate risk in banking book (continued)

IRRBA: Interest rate risk in banking book – risk management objectives and policies (continued)

The Group calculates the NII and EVE according to the local standard framework for measuring IRRBB risk exposure in the Hong Kong Monetary Authority's Supervisory Policy Manual IR-1, which includes six interest rate shock scenarios:

- parallel shock up;
- parallel shock down;
- steeper shock (short rates down and long rates up);
- flattener shock (short rates up and long rates down);
- short rates shock up; and
- short rates shock down.

In the standardised framework implementation, the Group includes commercial margins and other spread components into the cash flows and discounts them at risk-free rates. For products with customer behavior models, such as non-maturity deposits, retail fixed-rate loans with early repayment risk and retail time deposits with early redemption risk, model and parameter assumptions are based on historical analysis. The average repricing maturity and the longest repricing maturity assigned to non-maturity deposits are 0.3 years and 5 years respectively. Assumptions and parameters are updated, reviewed and independently validated regularly.

The Group uses scenario analyses and stress tests to assess the banking book interest rate risk that the Group would face under adverse circumstances.

IRRBB1: Quantitative information on interest rate risk in banking book

		(a)	(b)	(c)	(d)
		Δ EVE ¹		Δ NII ¹
