SmartGuard Critical Illness Plan

We have different targets to achieve in our whole life.

Undoubtedly, we want to retire and enjoy the rest of our life with ease after fighting for years. Nevertheless, critical illnesses often strike without warning. Bad news dawning all of a sudden will derail your desirable plans and may even burden your beloved ones.

Cancer +

- In Hong Kong, 1 in 5 women and 1 in 4 men may develop Cancer throughout their lives.
- Although the rate of contracting Cancer has increased, the survival rates have also increased substantially, as a result of the improved medical technology. However, cost for medical treatment can cost you a pretty penny.
- Currently not all the drugs used in Colorectal Cancer targeted therapies are under the Hospital Authority's Drug Formulary and are not subsidised. As a result, a 6-month-long Colorectal Cancer target therapy course can cost more than HKD100,000 which is difficult to afford for the general public.
- The survival years can be increased by 2.5 years after having received chemotherapy and targeted therapy treatments for Colorectal Cancer.

Heart Attack and Stroke+

- Heart Attack is the third most common cause of deaths in Hong Kong.

6000+3000

- According to the statistics of 2016 from the Department of Health, the Government of HKSAR, the total number of deaths due to Heart Attack is over 6,000; over 3,000 of death cases were due to Stroke and among those death cases, 51.7% of which were of men.

Philosophy in Deciding Dividends:

Participating insurance plans provide policy owners an opportunity to receive a share of profits attributable to the participating life insurance business of BOC Life by means of dividends, with the potential prospect

of long-term rates of return. To accomplish the purpose, we invest in a wide range of asset portfolios that are prudently chosen by BOC Life to balance the risk. In general, the asset portfolios mainly consist of fixed income securities and equity investments.

The actual amount of dividends is determined by the stipulated surplus sharing approach in BOC Life's policy, which is based on the past experience of BOC Life and the long-term expectation of the participating life insurance business in the future. Dividends amount mainly depends on the overall performance of the participating life insurance business of BOC Life, taking into account factors including investment returns, claim experience, persistency and operating expense. The actual amount of dividends payable is recommended by our Appointed Actuary according to the aforementioned company's policy and approved by the Board of Directors of BOC Life.

In light of the above factors, dividends and Dividend Accumulation Rate are not guaranteed and may be higher or lower than the values illustrated in the benefit illustration provided at point of sale.

You may browse the following website, www.boclife.com.hk/ps, to understand BOC Life's philosophy in deciding dividends as well as dividend history for reference purposes. Please note that past performance of dividend is not an indicator for its future performance.

Risk Disclosure of RMB and USD Insurance:

RMB and USD policies are subject to exchange rate risk. The exchange rate between RMB and HKD or USD and HKD may rise as well as fall. Therefore, if calculated in HKD, premiums, fees and charges (where applicable), account value / surrender value and other benefits payable under RMB or USD policy will vary with the exchange rate. The exchange rate between RMB and HKD or USD and HKD will be the market-based prevailing exchange rate determined by BOC Life from time to time, which may not be the same as the spot rate of banks. The fluctuation in exchange rate may result in losses if a customer chooses to pay premiums in HKD, or requests the insurer to pay the account value / surrender value or other benefits payable in HKD, for RMB or USD policy. **RMB Conversion Limitation Risk** - RMB Insurance are subject to exchange rate fluctuations which may provide both opportunities and risks. The fluctuation in the exchange rate of RMB may result in losses in the event that the customer converts RMB into HKD or other foreign currencies. (Only applicable to Individual Customers) RMB is currently not fully freely convertible. Individual customers can be offered CNH rate to conduct conversion

of RMB through bank accounts and may occasionally not be able to do so fully or immediately, for which it is subject to the RMB position of the banks and their commercial decisions at that moment. Customers should consider and understand the possible impact on their liquidity of RMB funds in advance. (Only applicable to Corporate Customers) RMB is currently not fully freely convertible. Corporate customers that intend to conduct conversion of RMB through banks may occasionally not be able to do so fully or immediately, for which it is subject to the RMB position of the banks and their commercial decisions at that moment. Customers should consider and understand the possible impact on their liquidity of RMB funds in advance.
