RMB investments are subject to exchange rate fluctuations which may provide both opportunities and risks. The fluctuation in the exchange rate of RMB may result in losses in the event that the customer converts RMB into HKD or other foreign currencies. Currency exchange is also subject to cost (being the spread between the buy and sell of RMB). RMB is currently not fully freely convertible. Corporate customers that intend to conduct conversion of RMB through banks may occasionally not be able to do so fully or immediately, for which it is subject to the RMB position of the banks and their commercial decisions at that moment. Customers should consider and understand the possible impact on their liquidity of RMB funds in advance.

Risk Disclosure of Investment Funds:

Fund products or services are not equivalent to, nor should it be treated as a substitute for, time deposit. Although investment may bring profit opportunities, each investment product or service involves potential risks. Due to dynamic changes in the market, the price movement and volatility of investment products may not be the same as expected by you. Your fund may increase or reduce due to the purchase or sale of investment products. The value of investment funds may go up as well as down and the investment funds may become valueless. Therefore, you may not receive any return from investment funds. Part of your investment may not be able to liquidate immediately under certain market situation. Currency exchange is also subject to cost (being the spread between the buy and sell of relevant currencies).

RMB Conversion Limitation Risk:

Risk of Bonds Trading:

The prices of bonds fluctuate, sometimes dramatically. The price of a bond may move up or down, and may become valueless. It is as likely that losses will be incurred rather than profit made as a result of buying and selling bonds.

Key Risk Disclosures

- **Investment risk:** The prices of bonds may go up and down and may be volatile. The bonds may even become worthless. Buying and selling bonds may not necessarily result in any profit, and may sometimes result in loss.
- **Issuer / Guarantor credit risk:** The return on bonds is linked to the credit of the Issuer and Guarantor, as applicable. The credit ratings assigned by credit rating agencies do not guarantee the creditworthiness of the Issuer and Guarantor, as applicable. In the event that the Issuer defaults, it is possible that you may lose all your investment, including the principal.

- **To be distinguished from savings or time deposits:** The bonds are an investment product and are not equivalent to a time deposit, and are unsecured and are not guaranteed (if there is no guarantor). The bonds are not protected deposits under the Deposit Protection Scheme in Hong Kong. The bonds are not principal-protected. The investment in bonds involve risks not associated with regular bank deposits and should not be regarded as a substitute for regular savings or time deposit.
- **Not covered by the Investor Compensation Fund:** The bonds are not covered by the Investor Compensation Fund.
- **Interest rate risk:** Changes in interest rates may have a significant impact on the market price of the bonds. For example, bond prices generally fall when interest rates rise - In this situation, you may incur a loss from the decrease in market price of the bonds if you sell the bonds before the final maturity date.
- **Currency risk:** For bonds not denominated in your home currency, if the currency in which the bonds are denominated depreciates against your home currency during your holding period, and if calculated and settled in your home currency, exchange rate fluctuations may have an adverse impact on, and the potential loss may offset (or even exceed), the investment return.
- **Tenor risk:** The bonds have a specified investment period. The longer the investment period of the bonds, the more likely changes in interest rates, exchange rates, market environments and the Issuer's creditworthiness (if any) may be substantially lower than expected and you may even suffer losses.
- **Liquidity risk:** The bonds are designed to be held to maturity and there may be no active secondary market quotations for the bonds. If you try to sell your bonds before maturity, it may be difficult or impossible to find a buyer, or the sale price may be much lower than the amount you had invested. You may suffer a loss if you sell your bonds before maturity.
- **RMB Conversion Limitation Risk:** RMB investments are subject to exchange rate fluctuations which may provide both opportunities and risks. The fluctuation in the exchange rate of RMB may result in losses in the event that the customer converts RMB into HKD or other foreign currencies. Currency exchange is also subject to cost (being the spread between the buy and sell of RMB). (Only applicable to Corporate Customers) RMB is currently not fully freely convertible. Corporate customers that intend to conduct conversion of RMB through banks may occasionally not be able to do so fully or immediately, for which it is subject to the RMB position of the banks and their commercial decisions at that moment. Customers should consider and understand the possible impact on their liquidity of RMB funds in advance.
- **Emerging Market Risk:** Investing in emerging markets involves certain risks and special considerations not typically associated with investing in other more established economies or securities markets. Such emerging markets may lack the social, political or economic stability. Exposure to these markets may entail more volatility than investments in more established markets. (Applicable for RMB Bonds)
- **Other risks:** There may be other risks associated with the investment of each particular bond which are not mentioned above, please refer to each individual Term Sheet for details.

Risk of Precious Metals Trading:

The market in precious metals is volatile and a substantial loss may be incurred from transacting in them. Due to the fluctuating nature of the precious metals markets, their prices may rise or fall beyond your expectations and your investment funds may increase or decrease in value as a result of selling and purchasing of precious metals. Before making any investment decision, you should assess your own willingness and ability to bear risks and are advised to seek advice from an independent financial advisor.

Risk of Notional Precious Metals Passbook Account:

- **NOT principal protected:** Your investments in the Product are not principal protected. In the worst case scenario, you could lose your entire investment.
- **NOT a time deposit:** Your investments in the Product are not equivalent to nor should it be treated as time deposits.
- **NOT an interest-bearing account:** The Product Account (as defined under the section headed "What are the key features?" on page 3 in the "Product Key Facts Statement" on the website of BOCHK (www.bochk.com)) through which the investment in the Product is conducted is not an interest-bearing account with neither yield nor interest.
- **NOT protected deposit:** Your investments in the Product are not protected deposits and are not protected by the Deposit Protection Scheme in Hong Kong.
- **NO physical delivery of Reference Assets** (as defined under the section headed "What are the key features?" on page 3 in the "Product Key Facts Statement" on the website of BOCHK (www.bochk.com)): The Product does not involve physical delivery of any Reference Asset. You do not have any rights, ownership or possession of any physical precious metal.
- **There is NO collateral:** The Product is NOT secured on any assets or any collateral of the Bank.
- **NOT the same as investment in the Reference Assets:** Investing in the Product is not the same as investing in the Reference Assets directly.
